

Salman Ahmed

Full Stack Engineer

isalmandev@gmail.com | linkedin.com/in/salmangujar-dev | github.com/salmangujar-dev | salmangujar.vercel.app

Skills

Languages: TypeScript, JavaScript, Python, Java, Swift, Dart, Crystal

Frontend: React.js, Next.js, Nuxt.js, Redux, Redux Saga, RTK Query, Zustand, Jotai, SWR, Storybook.js, Tailwind CSS, Material UI, Bootstrap

Backend & APIs: Node.js, Express.js, NestJS, Fastify, Python, FastAPI, Spring Boot, REST APIs, OpenAPI/Swagger, LangChain, LangGraph

Mobile: iOS (UIKit), Kotlin, React Native

Databases: MongoDB, PostgreSQL, MySQL

Caching, Message & Queues: Redis, Bull Queue, RabbitMQ

Cloud, Storage & DevOps: AWS (including S3), GCP, Azure App Services, Cloudflare R2, Docker, Kubernetes

CMS: Strapi

Repositories: Git, Bitbucket, SVN

Experience

Senior Full Stack Engineer, OneStream Live

Dec 2024 – Present

- Led **Frontend 2.0** and **Backend 3.0** initiatives across a live streaming platform serving 45+ social media integrations, making key architectural decisions and enforcing **SOLID/DRY principles** for a team of ~8 engineers.
- Architected a component-driven design system with **Storybook.js**, comprising 30+ reusable components, reducing UI inconsistencies and cutting frontend development time by an estimated **25%**.
- Designed and implemented a **subscription management system** integrated with **Chargebee** and **Transact Bridge**, enabling fully automated billing workflows and reducing manual billing errors significantly.
- Established an **OpenAPI-driven** development workflow with **Swagger** documentation and **TypeScript** code generation, enforcing strict API contract alignment and reducing integration bugs.
- Conducted regular code reviews and introduced **Redux Saga** for complex async flows; implemented a **GDPR-compliant** cookie consent system ensuring regulatory compliance across all user-facing surfaces.

Full Stack Engineer, Devsinc

May 2023 – Dec 2024

- Took **end-to-end ownership** of three **Next.js** microservices in a **TurboRepo** monorepo for RemoteReps, delivering features in an **Agile/Scrum** environment with bi-weekly sprints.
- Increased outbound conversion rates by **12–22%** by building personalized email outreach at scale using **LangChain** with **OpenAI** and **Anthropic LLMs**, collaborating with AI and frontend teams throughout integration.
- Reduced API response time by **40%** and server load by **45%** by architecting **Redis** caching and an optimized **Bull Queue-based** campaign flow system for high-volume scheduled email delivery.
- Published reusable **React** component libraries as **NPM** modules, improving development efficiency and promoting consistent design patterns across multiple project teams.
- Deployed backend and frontend on **Azure**, **GCP**, and **AWS**; mentored **junior engineers** through code reviews, achieving a reported **25%** reduction in bugs on the **RemoteReps** project.

Backend Engineer, i2c Inc.

Sept 2022 – May 2023

- Led a team of **4 engineers** in successfully migrating and testing 100+ critical **production microservice applications** from legacy infrastructure, ensuring zero service disruption and meeting all delivery milestones.
- Revamped legacy source code across multiple **production microservices**, improving build stability, reducing runtime errors, and delivering measurably faster execution performance via **multithreading**.
- Pioneered the ground-up development of **new multithreaded microservice applications** using Java/Spring Boot, adhering to best coding practices, writing unit tests, and applying modern architectural methodologies.

- Designed and delivered custom software solutions for **5+ SMB clients** across **e-commerce** and **service verticals**, consistently meeting deadlines and requirements through structured **Agile delivery**.
- Improved application load time by **40%** across multiple client projects by refactoring and optimizing existing codebases, including asset compression and query optimization.
- Built and maintained a **multi-tenant e-commerce** platform with custom modules for inventory, payments, and store performance, actively used and maintained post-handoff.

Projects

OneStream Live

app.onestream.live

- **Cloud-based live streaming platform; Tech Stack:** *TypeScript, React.js, Storybook.js, Express.js, Redux-Saga, Redis, Bull Queues, MySQL, RabbitMQ, Docker, K8s*
- Architected subscription billing, **GDPR** cookie consent system, and integrated **Chatwoot**, **Unleash**, **FirstPromoter**, and **Mautic** for user engagement, feature flag management, and marketing automation.

AI Synapse (Nodes.inc)

nodes.inc

- **AI-driven sales automation platform; Tech Stack:** *TypeScript, Next.js, NestJS, Python, FastAPI, Redis, Bull Queues, LangChain, MongoDB, Docker, Kubernetes, Azure*
- Led backend development and increased outbound conversion rates by **12–22%** through **personalized ICP** LLM-powered outreach at scale.
- Cut server costs measurably via Redis caching (**40%** faster API responses) and optimized campaign flow logic (**45%** lower server load); deployed on Azure App Service and AKS.

RemoteReps

app.remotereps.com

- **Global outsourcing platform; Tech Stack:** *TypeScript, React.js, Storybook.js, Express.js, Redux-Saga, Redis, Bull Queues, MySQL, RabbitMQ, Docker, K8s*
- Reduced redundant API calls by **50%** through intelligent caching and improved page load performance by **30%** with several optimization techniques, i.e., debouncing, throttling, virtualization, codesplitting, tree shaking, lazy loading, and memoization of components, callbacks, and states.
- Improved overall code quality by **30%** through peer programming sessions and code review processes; implemented full **WAI-ARIA** accessibility compliance across the platform.

Education

FAST NUCES – BS in Computer Science

Aug 2018 - June 2022
